Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analyzing expression profile or pattern of a gene and identifying homologous gene gene.

Claim 8; SEQ ID NO 289; 246pp + Sequence Listing; English

The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino analysing

These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office

This invention describes a novel isolated polynucleotide (I) containing at least one sequence that (i) is 70% identical with a sequence that (c) encodes at least one of 251 amino acid (aa) (3) or 108 aa (5) copolypeptides; (ii) encodes a polypeptide at least 70% identical with (3) cor (5); (iii) is the complement of (i) or (ii), or (iv) contains at least cor (5); (iii) is the complement of (i) or (ii), or (iv) contains at least cor (c) is consecutive bases from (1)-(iii). The invention also describes (a) coryneform microorganisms, especially corynebacterium, transformed with contain craby fermentation of coryneform bacteria in which the coryneformhed-chain L-aa by fermentation of coryneform bacteria in which the corynead-chain panels (or equivalent sequences) are amplified, corynead-coryneform bacteria being coryneform bacteria being used for fermentative production of coryneform bacteria being used for fermentative production of parached-chain amino acide, coryneases yield of barached-chain amino acide, which are useful in medicine and animal nutrition. (I) can also be used as source of primers and coryneases yield of barached-chain amino acide. This sequences the corynebacterium glutamicum arcc 13032 brnf and brnE proteins described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New export genes from coryneform bacteria, useful for increasing fermentative production of branched-chain amino acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1271 BP; 265 A; 328 C; 318 G; 360 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 4 (i); Page 17-18; 23pp; German

```
CC at least one sequence that (i) is 70% identical with a sequence that CC encodes at least one of 251 amino acid (aa) (3) or 108 aa (5) CC polypeptides; (ii) encodes a polypeptide at least 70% identical with (3) CC or (5); (iii) is the complement of (i) or (ii), or (iv) contains at least CC 15 consecutive bases from (i)-(ii). The invention also describes (a) CC protein derived from sequences of 753 bp (2) or 324 bp (4); (b) CC coryneform microorganisms, especially Corynebacterium, transformed with CC one or more (1), where these are replicative DNA; (c) production of CC branched-chain I-aa by fermentation of coryneform bacteria in which the CC brnE and/or brnP genes (or equivalent sequences) are amplified, and (b brnE and/or brnP genes (or equivalent sequences) are amplified, CC especially overexpressed; and (d) method for isolating the brnE and/or CC used for fermentative production of branched-chain mino acids, completed in triffically leucine, isoleucine and valine, which are useful in medicine CC and animal nutrition. (I) can also be used as source of primers and CC increases yield of branched-chain amino acids. This sequence encodes the CC crynebacterium glutamicum ATCC 14752 brnP and brnE proteins described in CC the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match 100.0%; Score 1271; Best Local Similarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Searched:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
